Environment Haliburton! supports efforts to keep lead fishing tackle out of our lakes and rivers.

Lost lead-containing tackle kills Loons, as well as other waterfowl and wildlife. Since the launch of the Let's Get the Lead Out program, approximately half a ton of lead has been removed from fishing tackle boxes in Ontario. At least that much that has, and continues to accumulate in our lakes and rivers. For the sake of our wildlife, Environment Haliburton! concurs that this problem should be addressed aggressively.
